WRM Quality Assurance (QA) Inspections

We all know the importance of maintaining War Reserve Material (WRM) assets in serviceable condition, yet recent spot inspections have revealed more attention is required when performing Quality Assurance (QA) inspections. This is particularly true for non-deteriorative items, such as litters, blankets, air mattresses, tubing, etc. which some may wrongly assume to have an indefinite service life. Despite being categorized as "non-deteriorative," these items are still subject to damage and deterioration that will render them unserviceable. The occurrence of deterioration in storage depends on storage conditions, the nature of the materials, and the types of preservation and packaging. Chemical change may occur in some materials even under ideal storage conditions due to chemical interaction of component materials or due to normal aging. Textile finishes may become stiff, soft, or sticky. Rubber and plastic items may warp,

crack, or lose resiliency and become brittle. The surfaces of metal components are prone to rusting, oxidation, or flaking that may render the item useless.

In order to ensure WRM packages are never deployed with unserviceable material, you must adhere to all QA inspection guidance. During end-of-month processing, MEDLOG generates the Quality Assurance Inspection List (PCN SI008-Y16), which identifies WRM assets requiring inspection. This list is produced by detachment, WRM project, section, box, in stock number sequence and shows all non-dated WRM assets due a QA inspection. Use this list to perform QA inspections using the inspection codes and the criteria outlined in DLAR 4155-37, "Material Quality Control Standards." The two-digit inspection code alerts inspection personnel to potential defects that require special attention. For example, code "B3" alerts personnel to examine the item for any discoloration, growth or decay caused by fungi which indicates the presence of mildew, mold, or dry rot.

You should make sure the correct inspection cycles and inspection codes are loaded in the Master Record. Items with an inspection date of "0000" indicate that the 1st or 2nd inspection cycle is not loaded in the Master Record or the manufacture date is not loaded in the QA record. Refer to AFCSM 41-230, "MEDLOG Software Users Manual," and take corrective action as necessary. Also, you may find some NSNs that do not have an inspection code assigned. Again, take corrective action as necessary by ensuring appropriate inspection codes are assigned. Specifically, AFMAN 23-110, Vol 5, Para 19.6.2 states non-deteriorative medical items will be coded with the inspection code "Z9", which has an initial inspection period of 36 months and a re-inspection period of every 12 months thereafter. The intent of the inspection period is to assure all items are periodically checked for suitability.

Sampling procedures for storage surveillance are designed to provide the broadest range of coverage with a minimum expenditure of man-hours consistent with the desired level of quality assurance. The primary purpose of surveillance sampling is to evaluate selected characteristics and

to detect any item that has deteriorated beyond serviceability. DLAR 4155-37, Appendix M and T, provide guidelines for statistical sampling. Typically, 5 percent of containers will be randomly inspected, but you should exercise due diligence and common sense when performing surveillance sampling. The sample should be randomly selected so that it's an adequate representation of inventory, not just the items on top that are most accessible. In addition, you should not inspect the same containers or items each time you perform the QA inspection. You should consider larger sample sizes for items more prone to deterioration due to poor storage conditions, excessive handling and movement, and older items in inventory. If sampling renders the item unserviceable, process a MEDLOG destruction document to record the loss and turn item into DRMO (AFMAN 23-110, Vol 5, Ch. 12, "Gains and Losses of Inventory").

When determining serviceability, you should examine the item thoroughly for any deterioration. For example, blankets and air mattresses should be unfolded and spread to examine all surfaces and components using flexing and pulling forces to reveal any presence of deterioration. If you have any doubt as to the serviceability of a particular medical item, you should check with an appropriate clinician. Remember, the full capability of your WRM assemblage is only as good as the QA action to ensure every component item is serviceable.

To assist you with guidance on QA inspections we have added several web links to AFMLO's Quality Assurance web page. You can now access an electronic copy of DLAR 4155-37, "Material Quality Control Storage Standards" www.armymedicine.army.mil/afmlo/fom-p/QAMenu.htm. Also added to the QA web page is a link to the DLA Customer Assistance Handbook, which covers numerous subjects including shelf life codes and inspection timelines. You can also order a hard copy of the DLA Customer Assistance Handbook from the web site.

Allowance Standard (AS) Updates

Attachment 4 contains updates to many medical Allowance Standards (AS). Changes were the result of cataloging actions to replace Acquisition Advice Code "V" and "Y" NSNs and Offices of Primary Responsibility (OPR) generated changes. These changes are provided to update your WRM and Medical Equipment Management Office records. Remember to establish prime substitutes (P&S) relationships when applicable. Use the information in the "Add" and "Replaced" portion of the change document to determine if you should establish the P&S relationship. If the old NSN is identified as being replaced, and you have on hand balances, the P&S relationship should be established. Adjust your WRM levels if the NSNs are listed as direct "Add" or "Delete." If you have any questions or concerns contact the appropriate AS manager. The most current AS versions can be found on the AFMLO Home under the Medical Combat Support Operations Team option. (AFMLO/FOC-O, Ms. Anne Newcomer, DSN 343-4118, anne.newcomer@ft-detrick.af.mil)

Upcoming Prime Vendor (PV) In-Process Reviews

The IPR for the Hawaii Med/Surg Prime Vendor Region is scheduled for 30 May 2000 at the Bergen Brunswig Distribution Center in Kapolei, Hawaii. Hickam is the only affected Air Force facility. An IPR for the Pacific Region is planned for June 2000, which affects Andersen, Kadena, Kimhae, Kunsan, Misawa, Osan, and Yokota.

Bases listed above are reminded to return their customer satisfaction surveys to DSCP before the meeting dates. IPR meetings provide a forum to

voice any questions or concerns about the Prime Vendor contract. All affected facilities are strongly encouraged to participate. (AFMLO/FOM-P, Maj Gil Weston, DSN 343-4168, gil.weston@ft-detrick.af.mil)

Updating the USAF Medical Logistics Directory

The next edition of the USAF Medical Logistics Directory (Bluebook) will be published in May 2000. *Changes to be incorporated must be received no later than 15 April 2000.* Updates may be made directly to the Bluebook on the AFMLO Home Page (<http://www.medicine.army.mil/afmlo/>), via email to sarah.ring@ft-detrick.af.mil or by completing **Attachment 6** and mailing or faxing to AFMLO/FOA. Current Status of Decentralized Blanket Purchase Agreements

Page 1 of **Attachment 3** is a list of pen and ink changes to the current consolidated Decentralized Blanket Purchase Agreement (DBPA) Information List provided in Attachment 3 of AFMLL 01-2000.

Change to West Coast Customer Service

The West Coast Customer Service will no longer assist PACAF medical facilities with DBPA shipments sent to Tracy. The Defense Distribution Call Center located at Defense Distribution Center, New Cumberland, PA, now provides customer service support to both USAFE and PACAF medical facilities. All overseas medical facilities should contact the Defense Distribution Call Center for

The AFMLL is a specialized newsletter published by the Air Force Medical Logistics Office. The AFMLL is published monthly to provide medical logistics information to Air Force medical activities worldwide. Our goal is to ensure all Air Force medical treatment facilities receive the highest level of medical logistics support. In that regard, we solicit your articles for inclusion in the AFMLL to relay information for use by other activities. For additional information concerning this publication, call (301) 619-4182/DSN 343-4182 or write to the AIR FORCE MEDICAL LOGISTICS OFFICE/FOA, ATTN: Ms. Donna Poffinberger, 1423 SULTAN DRIVE, SUITE 200, FORT DETRICK, MARYLAND 21702-5006.
